## Technical Data

### Dosage to create "summer" mix from "winter" mix:

SureStamp—3 oz.  
SureSpray—8 oz.  
SureTex—7 oz.

### Appearance:

Clear liquid

### Shelf Life:

1 year

### Packaging:

1 Gallon Jug

### Storage:

Containers should be properly stored. Prevent accumulation of water, dirt or other residue on covers. Protect from freezing.

### DESCRIPTION

*SureCrete's Retarder* is a safe non-hazardous, water borne retarder for cementitious products. It was designed specifically to slow the set of *SureTex*, *SureSpray*, or *SureStamp* that are seasonally adjusted to "winter" mix design. While a more rapid set is a desirable feature for cold weather or interior applications, "winter" mix can be unmanageable in warmer weather, especially exterior applications. *Retarder* can slow the rapid set of the "winter" mix.

### APPLICATION

Shake the jug well. Some "flakes" of settled material may become suspended in the jug; these will not affect the performance. *Retarder* is placed into the water prior to the addition of the dry bag mix. The very small quantity required for retarding does not need to be factored into the total water demand. Mix the bag mix product as usual.

### LIMITATIONS

*Retarder* that is excessively added can slow the set of the cementitious product to an extreme degree. Eventually the product may reach initial set, but the time required may be days, not hours.

### WARRANTY

Warranty of this product, when used according to the directions, is limited to refund of purchase price, or replacement of product (if defective), at manufactures/seller's option. SureCrete Design Products shall not be liable for cost of labor or direct and/or incidental consequential damages.
